Check-boxes reserved for designating States (for the purposes of a national patent) which have become party to the PCT after issuance of this sheet.

Precautionary Designation Statement: In addition to the designations made above, the applicant also makes under Rule 4.9(b) all other designations which would be permitted under the PCT except any designation(s) indicated in the Supplemental Box as being excluded from the scope of this statement. The applicant declares that those additional designations are subject to confirmation and that any designation which is not confirmed before the expiration of 15 months from the priority date is to be regarded as withdrawn by the applicant at the expiration of that time limit. (Confirmation of a designation consists of the filing of a notice specifying that designation and the payment of the designation and confirmation fees. Confirmation must reach the receiving Office within the 15-month time limit.)

1. The applicant is hereby notified that this International Preliminary Examining Authority transmits herewith the international preliminary examination report and its annexes, if any, established on the international application.
2. A copy of the report and its annexes, if any, is being transmitted to the International Bureau for communication to all the elected Offices.
3. Where required by any of the elected Offices, the International Bureau will prepare an English translation of the report (but not of any annexes) and will transmit such translation to those Offices.

4. REMINDER

The applicant must enter the national phase before each elected Office by performing certain acts (filing translations and paying national fees) within 30 months from the priority date (or later in some Offices)(Article 39(1))(see also the reminder sent by the International Bureau with Form PCT/IB/301).

Where a translation of the international application must be furnished to an elected Office, that translation must contain a translation of any annexes to the international preliminary examination report. It is the applicant's responsibility to prepare and furnish such translation directly to each elected Office concerned.

For further details on the applicable time limits and requirements of the elected Offices, see Volume II of the PCT Applicant's Guide.

V. Reasoned statement under Article 35(2) with regard to novelty, inventive step or industrial applicability; citations and explanations supporting such statement**1. statement**

Novelty (N)	Claims <u>1-8</u>	YES
	Claims <u>None</u>	NO
Inventive Step (IS)	Claims <u>None</u>	YES
	Claims <u>1-8</u>	NO
Industrial Applicability (IA)	Claims <u>1-8</u>	YES
	Claims <u>None</u>	NO

2. citations and explanations (Rule 70.7)

Claims 1-8 lack an inventive step under PCT Article 33(3) as being obvious over Tse et al. in view of Foster et al. Tse et al. teach similarly as the instantly claimed invention the use of a cryoprecipitate or cryogranulate procedure to prepare a stable fibrinogen composition from human origin which contains a high concentration of fibrinogen and very low levels of Factor VIII (FVIII). The dissolved cryoprecipitate is cooled to about 10° C to form cold-precipitate, then, the cold-precipitate is freeze-dried into cryogranules at -60° C or lower (i.e., frozen in liquid nitrogen).

Although, the reference does not specifically mention activated protein C, however, the reference clearly teaches the preparation of dissolved cryoprecipitate activated fibrinogen and FVIII. The activated fibrinogen and FVIII include the specific activated protein C since they are generic. For further support See e.g., the instant disclosure on page 1, lines 9-17 which acknowledges that protein C is a serine protease and naturally occurring anticoagulant that plays a role in the regulation of hemostasis by inactivating Factors Va and VIIIa in the coagulation cascade. Human protein C circulates as a 2-chain zymogen which is activated *in vivo* by thrombin and thrombomodulin on phospholipid surface resulting in activated protein C. Thus, in view of the above, the fibrinogen complex taught by the prior art clearly encompasses the instantly claimed activated protein C.

Tse et al. differ from claims 1-8 in not teaching a process of preparing a lyophilized formulation of activated protein C and the addition of a pharmaceutical acceptable bulking agent. With respect to lyophilization process, the reference of Tse et al. clearly teaches the use of lyophilized fibrinogen complex (See e.g., Figure 1 and col. 10, lines 1-4); however, the general method of lyophilization of protein pharmaceutical and the addition of a pharmaceutical bulking agent is conventional and within the ordinary skill in the art to which this invention pertains to lyophilize and add a pharmaceutically acceptable bulking agent of any protein of interest. Nevertheless, the lyophilization and the addition of a pharmaceutically acceptable bulking agent of activated protein C is clearly disclosed by (Continued on Supplemental Sheet.)

NONE

V. 2. REASONED STATEMENTS - CITATIONS AND EXPLANATIONS (Continued):

Foster et al. on col. 9, lines 62 to col. 10, lines 5.

Thus, in view of the above, one of ordinary skill in the art would have been motivated to adapt the well known lyophilization process and addition of pharmaceutically acceptable bulking agent scheme of Foster et al. reference into the method of Tse et al. reference because including such features into the method of Tse et al. reference would have been obvious to one having ordinary skill in the art to obtain the known and recognized functions and advantages thereof. Therefore, the combined teachings of the prior art makes obvious a process of preparing cryogranules of activated protein C and a lyophilized formulation having a pharmaceutically acceptable bulking agent thereof.

Claims 1-8 meet the criteria as set forth by PCT Articles 33(2) and 33(4).
